

# Trustwave Endpoint Protection Suite

## COMPLETE ENDPOINT PROTECTION DELIVERED FROM THE CLOUD

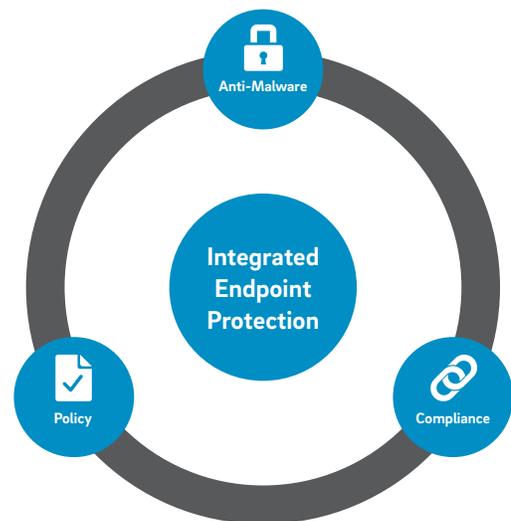

Endpoint security should be easier. Whether you're protecting your endpoints against advanced malware, preventing loss of corporate or customer data from those endpoints or managing complex compliance policies, the range of tasks to secure endpoints can be a burden. Endpoint protection is a critical part of any defense-in-depth strategy, and to be effective for small-to-medium-size businesses and enterprises alike, protecting your endpoints needs to be simple and affordable.

The Trustwave Endpoint Protection Suite reduces costs and makes it easy through complete defense delivered from the cloud. Whether you're looking to improve the way you deploy and manage policy, audit your mobile devices or streamline compliance and strengthen security, Trustwave has you covered.

### Overview

Trustwave Endpoint Protection Suite is a powerful, cloud-based security solution that delivers integrated anti-malware, policy enforcement and simplified compliance management. By integrating core endpoint protection functions, Trustwave simplifies management and lowers security operational costs for greater adoption and optimal defense-in-depth against the full threat spectrum.

The Trustwave cloud-based delivery model reduces hardware costs and management overhead, allowing easier coverage of diverse and distributed endpoints, including laptops, tablets, and mobile and fixed point-of-sale (POS) systems. Modules for rogue device detection, file integrity monitoring, log collection and application whitelisting further enhance your security.

### Key Benefits

- **Simplified Security**  
Cloud-based delivery eliminates hardware investments and alleviates management overhead to provide the most simplified and efficient protection
- **Reduced Operational Costs**  
Empower your security budget to go further with no required investments in on-site equipment and greater efficiencies gained in resource management
- **All-in-One Protection**  
Integrated policy enforcement, compliance management and virus and malware security deliver complete defense-in-depth for your users, your network and your data

### Powerful Threat Protection

- **Real-time malware protection.** Provides real-time protection against threats on the endpoint, remote or removable drives and threats downloaded from the internet – and scans for dormant threats waiting to be activated to protect your organization against advanced targeted attacks.
- **Windows log collection and analysis.** Offers a simplified method for collecting and centrally storing required endpoint logs for your compliance and security audits, and works with Trustwave SIEM to provide event correlation, alerting and reporting.
- **Host based application whitelisting.** Provides granular control of what applications are allowed to execute on your endpoints and real-time visibility into potential policy violations affecting endpoint integrity.
